

Eurolook Transparent Roller Shutter

Applications

Shops, banks and museums, where security and transparency is essential, are using the Eurolook® Standard roller shutter throughout the world, up to 50M².

Key Benefits:

See through vision & quality

The transparent armour of Eurolook® -Standard is crystal clear, offers a transparency of 83% and allows 92% daylight. Because the Eurolook® Standard is UV-stabilised, it does not discolour or yellow and remains crystal clear for many years.

High Security

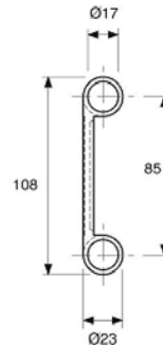

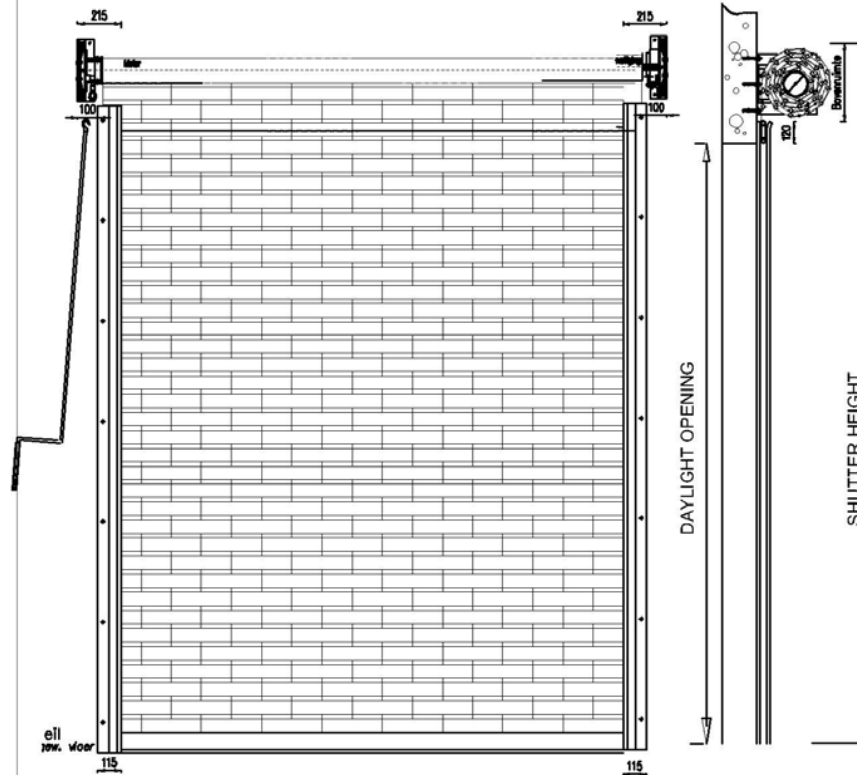

The Eurolook® - Standard armour is made of synthetic links of polycarbonate. These links are built in brick formation making it extreme secure with a maximum flexibility. Eurolook® Standard can bend, but cannot crack or break and is the only transparent façade shutter in Europe that has obtained the SKG Class 3 against the strict European standards ENV 1627-1630.

Fire Retardant

Eurolook® shutters have been awarded the highest European class of flame retardance – Class A certification.

Product Versatility

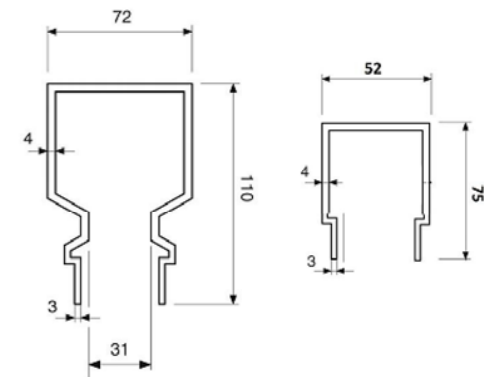

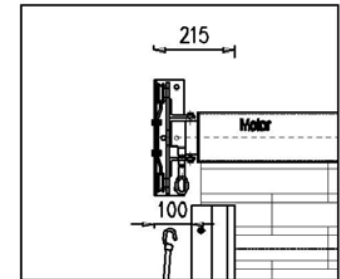

Eurolook® shutters are available in many forms and the standard system can be upgraded to become classified as Ramraid resistant. The shutter can be powder coated any RAL colour and there are mini links for smaller areas. Eurolook® - Standard is available in various versions such as transparent, frosted and ventilated as well as in a transparent version with a coating against scratches and graffiti.
